Fixed
Vehicle Operating Costs

NRMA Motoring & Services has conducted a survey of vehicle operating costs for over 1,800 vehicles using 13 popular categories as reported by VFACTS – an automotive industry body. The vehicles have been sorted into 22 classes to help make selecting a new car easier. NRMA reserves the right to amend vehicle class information where appropriate.

Calculations are for private ownership in New South Wales, based on an annual distance of 15,000 kilometres which is "the approximate national average distance travelled" according to the Australian Bureau of Statistics. Other factors included to calculate the running cost are an ownership period of 5 years, the average retail price for the vehicle and the following elements.

Depreciation

Depreciation is calculated using the vehicle manufacturers' recommended retail price plus dealer and statutory charges including Luxury Car Tax; less the forecast residual value for each model. Short term special offer pricing has not been included.

Opportunity Interest

Loss in interest from the capital consumed by depreciation is calculated using an interest rate of 7.05%. There has been no provision for the borrowing expense of the capital.

Vehicle Registration, CTP and Membership

Private registration rates from the NSW RMS and CTP estimates for NSW where the owner is aged between 29 and 55 (GST has been included) are used along with NRMA Classic Care Membership rates.

Maintenance and Repairs

Vehicle maintenance costs are calculated using manufacturers' recommended service schedules using retail prices and include a range of replacement parts (e.g. tyres and brake components) required for average city driving conditions. Note: Fixed Price Service costing has been incorporated where available.

Fuel

The amount of fuel used is calculated using Australian Design Rule ADR82/01. Figures include an appropriate factor to allow for variations in driving styles and conditions as per previous surveys. Where ADR82/01 data is not available, average fuel consumption is taken from road tests and research carried out by NRMA Motoring & Services. Average cost of fuel per kilometre is then calculated using the average price per litre for the recommended fuel type for each vehicle using values in the following table.

With fuel prices fluctuating, NRMA allows you to change the default petrol price which will automatically adjust the weekly or whole of life vehicle costs.

Green Vehicle Guide

Greenhouse Gas and Pollution are shown against each vehicle to allow for a more informed comparison to be made. See www.greenvehicleguide.gov.au for more information.

ANCAP ratings are a guide to the protection offered to the occupants in a crash. NRMA recommends a four, preferably a five star ANCAP rating. For more information go to ancap.com.au. Note: ANCAP ratings are provided by a third party and whilst all care has been taken NRMA accepts no responsibility for errors or omissions and readers are advised to make their own enquires on the crash ratings of a particular vehicle. ESC is required for a five star ANCAP rating.
